EDUCATION

Northeastern University, Boston, MA

May 2028

Candidate for Bachelor of Science in Electrical and Computer Engineering

GPA: 3.50

Relevant Coursework: Quantum Engineering, Circuits and Signals, Electronics, Digital Design, Embedded Design

SKILLS & INTERESTS

Software: Java, Python, C++, Solidworks, Onshape, Autocad, KiCad, Git, System Verilog, PSpice, MATLAB

Hardware: Soldering, Oscilloscope, PCB Design, 3D Printing, Arduino, STM32

Interests: Photography, Video games, Ultimate Frisbee, Gym, Fishing

PROFESSIONAL EXPERIENCE

Bendable Electronics and Sustainable Technologies Lab, Northeastern University

Boston, Massachusetts

Undergraduate Research Assistant

Dec 2025 - Present

- Develop machine learning models to optimize semiconductor nanofabrication processes for flexible electronic devices, reducing fabrication defects and improving device performance metrics across multiple sensor prototypes.
- Design and conduct experiments on flexible semiconductor electronic systems, analyzing material properties, thin-film deposition parameters, and device physics characteristics to drive data-driven process improvements.

Northeastern University

Boston, Massachusetts

Teaching Assistant - EECE 2160 Embedded Design

Dec 2025 - Present

- Support 100+ students in FPGA-based system design and embedded programming through weekly lab sessions, office hours, and one-on-one technical troubleshooting to reinforce core concepts in hardware-software integration.
- Grade labs, homework assignments, and exams while ensuring consistent evaluation standards, providing detailed technical feedback, and hosting regular review sessions to clarify embedded systems principles.

AI Edge Institute at Ohio State University

Columbus, Ohio

Student Researcher

May 2025 - Aug 2025

- Developed supervised learning models that improved classification accuracy by 22% on datasets exceeding 100k samples through systematic feature engineering and hyperparameter optimization techniques.
- Preprocessed and analyzed large-scale datasets, documented methodology and results in a 10-page technical research paper, and presented findings at program capstone to faculty and industry partners.

PROJECTS

Beacon Board

Boston, Massachusetts

Electrical Engineer at Northeastern SEDS

Dec 2025 - February 2026

- Designed a battery-powered STM32G0B1 beacon controller PCB in KiCad, enabling robot localization via triangulation relative to external beacons, integrating USB power, Li-ion charging, and stable 3.3 V regulation.
- Implemented a full schematic to PCB workflow, including SWD debugging, UART interfaces, and encoded beacon signaling protocols to synchronize transmissions and provide positional data for accurate triangulation.

TradeSafe

Dallas, Texas

Co-founder/Developer

Jul 2025 - August 2025

- Designed and implemented a mobile application to assist investors, integrating AI-driven stock recommendation algorithms, while ensuring an accessible interface for users with varying financial literacy.
- Developed and trained a custom machine learning model that outperformed baseline AI models by 18% in prediction accuracy, validated through backtesting on 50,000 + historical stock records dating back a decade.

LEADERSHIP EXPERIENCE

Northeastern SEDS, Lunabotics

Boston, Massachusetts

Project Lead, Embedded Sensor & Communication Boards

Jan 2026 - Present

- Led architecture and end-to-end development of IMU, UWB beacon, magnetic encoder, and I²C multiplexer PCBs for autonomous lunar rover; delegated tasks and conducted extensive, detailed schematic and layout reviews.
- Directed board bring-up, power integrity validation, and cross-team integration with firmware and controls, debugging I²C/CAN communication, optimizing signal reliability, and validating real-time localization.

Resident Student Association

Boston, Massachusetts

Assistant Vice President of Operations

Sep 2025 - Present

- Manage funding and budgeting for all Hall Councils and ResLife programming at Northeastern, overseeing allocation, financial tracking, and operational support for residential communities across the Boston campus.
- Plan and coordinate large-scale events by securing contracts and partnerships with Boston organizations to enhance student engagement and the campus community experience for residential students.
